Sprint 1

Sprint 1 Planning

i At the start of each sprint, look through your backlog and decide which tasks you will aim to complete during this sprint. Add these tasks to the relevant sprint. Complete your task sizing estimates, and create your burndown chart.

Formal Proposal Document:

 Heaven Santos - 8DIT Formal Project Proposal

Project Board Screenshot

Start of Sprint

1	>	Make HTML home page file #1	To do	homepage	Sprint 1
2	>	Set up placeholder items in homepage #2	To do	homepage	Sprint 1
3		Organise placeholders in homepage #3	To do	homepage	Sprint 1
4		Create and link CSS file #5	To do	misc	Sprint 1
5		Start creating style CSS #4	To do	misc	Sprint 1
6		Make splash screen file #6	To do	splashscreen	Sprint 1
7		Create link from splash screen to home page #7	To do	splashscreen	Sprint 1
8		Apply style to splash screen #8	To do	splashscreen	Sprint 1
9		Set up about me page #9	To do	about me	Sprint 1
10		Set up placeholder items in about me page #10	To do	about me	Sprint 1
11		Apply style to about me page #11	To do	about me	Sprint 1
12		Set up guestbook page #12	To do	guestbook	Sprint 1
13		Set up placeholder items in guestbook page #13	To do	guestbook	Sprint 1
14		Apply style to guestbook page #14	To do	guestbook	Sprint 1

 You can't add Control + Space to add an item

Comments:

Focus on general structure and scaffolding.

Development Log 1

i As you work on your project, take note of key trialling and testing in this section. Be sure to clearly indicate when you are trialling something vs testing.

- **Trialling** is about gathering information to inform decision making
- **Testing** is about confirming decisions

25/05/26 2:53

Made initial commit: homepage.html

27/05/26 9:56

Added elements

HTML

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Archive08</title>
  <!--
  TODO: make style CSS
  TODO: make icon image
  -->
</head>
<!--this is where javascript code would be placed-->
<body>
  <header class="global-header"></header>
  <main class="content-wrapper">
    <section class=""
      <aside class="leftSidebar"></aside>
      <aside class="rightNavbar"></aside>
    </main>
</body>
</html>
```

27/05/26 10:22

End of class result

HTML

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Archive08</title>
  <!--
  TODO: make style CSS
  TODO: make icon image
  -->
</head>
```

<!--this is where javascript code would be placed-->

```
<body>
  <header class="global-header">
    <h1>Archive08</h1>
  </header>
  <main class="content-wrapper">

    <section class="intro-section">
      <h2>Introduction</h2>
      <p>This is the introduction section.</p>
    </section>

    <aside class="left-sidebar">
      <h3>This is the left sidebar.</h3>
    </aside>

    <aside class="right-navbar">
      <h4>This is the right navbar.</h4>
    </aside>

  </main>

  <footer class="global-footer">
    <h1>This is the footer.</h1>
  </footer>
</body>
</html>
```

02/06/26 10:42

Add style.css and put blue bg on header text

CSS

```
/* || GENERAL STYLES */

.global-header {
  background-color: blue;
}
```

02/06/26 11:20

Add style to header and main content

CSS

```
/* global header style */
.global-header {
  height: 200px;
  margin: 10px;
  background-color: blue;
  display: flex;
  justify-content: center;
  align-items: center;
}

/* main content style*/
.content-wrapper {
  height: 400px;
  margin: 10px;
  background-color: gray;
  display: flex;
  justify-content: center;
  align-items: center;
}

/* middle introduction section*/
.intro-section {
  position: relative;
  background-color: antiquewhite;
  display: flex;
  justify-content: center;
  align-items: center;
}

/* intro header*/
.content-title {
  position: absolute;
  top: 0;
  height: 30px;
  background-color: pink;
  justify-content: center;
  align-items: flex-start;
}
```

02/06/26 11:40

End of lesson: working on sidebars

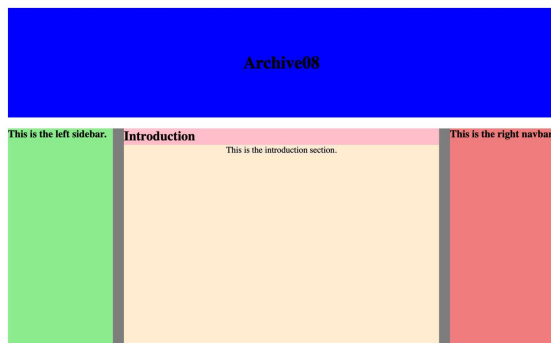

CSS

```
/* left Sidebar */
.left-sidebar {
  height: 400px;
  width: 200px;
  background-color: lightgreen;
  overflow: auto;
  margin-left: auto;
}

/* right navbar */
.right-navbar {
  height: 400px;
  width: 200px;
  background-color: lightcoral;
  overflow: auto;
  margin-right: auto;
}
```

03/06/26 1:15

Add basic page layout

This is the footer.

05/06/26 3:02

Made splashpage/homepage

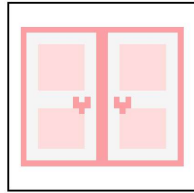

Welcome to Archive08!

This is the splashpage :D

This should be the first thing you see when you enter my website.

This is also used as a placeholder page,
so you might be sent here if you clicked a broken link, or a link that doesn't exist yet.

Click the door to return to the homepage V

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <link href="style.css" rel="stylesheet">
  <title>Placeholder page</title>
</head>
<body>
  <main class="index-content-wrapper">
    <h1>Welcome to Archive08!</h1>
    <h2>This is the splashpage :D</h2>

    <p class="main-section-wrapper">
      This should be the first thing you see

Sprint 1 Review

i Summarise key feedback from trialling and testing.

From my feedback I have had many key take aways.

The product of my first sprint was generally well-received. Aesthetics-wise, my testers thought my website layout had a good structure, and it has good potential for polishing into a finished product. In terms of aesthetics, my only improvements would be to add more graphics and style to my website to looks more interesting. I will implement these improvements on sprint 2.

Site engagement may need more work. From my feedback, I need to make site navigation more interesting and fun. Improvements include interactive elements like buttons and sound effects. I will also implement these in sprint 2.

In terms of usability and ease of access, I may need to make my site easier to navigate. Suggestions I have received are solutions like increasing text size and indicating links better. I will focus on these aspects next sprint.

Sprint 1 Retrospective

i Reflect on your progress throughout this sprint. Identify what went well, and what could be changed for the next sprint

Burndown Chart

End of Sprint

General Comments:

Outstanding Tasks:

- **Apply style to splash screen** - Not priority, will focus on next sprint.
- **Set up placeholder items in about me page** - Mainly focused on fixing the placement of my items within the homepage, so the about me page will need more content.
- **Apply style to about me page** - Not priority, will focus on next sprint.
- **Apply style to guestbook page** - Not priority, will focus on next sprint.
- **Add art gallery page** - Forgot to add this task until late into the sprint. Will add next sprint.

Blockers & Challenges:

- Main blocker: CSS styling was confusing/ didn't work at times. Lots of my style conflicted at times, not properly displaying my content. I mainly fixed this using seperated div classes.
- I could also not push my commits on to github because I had a temporary laptop, which caused internet connectivity issues. I got a replacement later on so it was fixed.
-
- **What I'll do differently in Sprint 2:**
- I will likely need to clean up my CSS styling so it becomes easier to read/change. Also need to add more comments.
- Regularly commit

Trialled Components:

Relevant Implications Discussion:

Accessibility:

I made sure to include semantic html tagging, so my code structure is more conventional and easier to

read. The overall layout of my page was well-received and my diverse tester did not experience much difficulty exploring and reading my content.

Usability:

Feedback from my page showed that it has a good foundation, and has great potential to be polished into an intuitive interface. However, my navigation was not as easy to do and confusing. I will need to focus on making navigation easier to use.

Privacy:

Apart from my plan to implement visitors to leave persistent messages, there will be potential risk to sharing sensitive information at the user's risk. To mitigate this, I may add warnings and disclaimers not to share personal information

Functionality:

All links were functional.

Sprint 2

Sprint 2 Planning

i At the start of each sprint, look through your backlog and decide which tasks you will aim to complete during this sprint. Add these tasks to the relevant sprint. Complete your task sizing estimates, and create your burndown chart.

Comments:

Start implementing style into each web pages and in general. Focus on user engagement and consider sound effects.

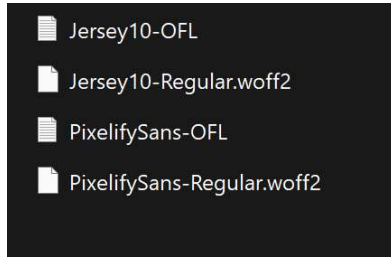

Development Log 2

i As you work on your project, take note of key trialling and testing in this section. Be sure to clearly indicate when you are trialling something vs testing.

- **Trialling** is about gathering information to inform decision making
- **Testing** is about confirming decisions

19/06/26 3:09

Add two new fonts

I tried using Jersey10, which was easier to read, but Pixelify sans fit my aesthetic more.

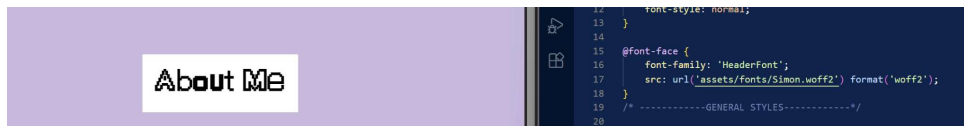

[Pixelify Sans font](#)

[Jersey10 font](#)

22/06/26 2:49

Add header font

[Simon font](#)

22/06/26 3:07 wip banner graphic

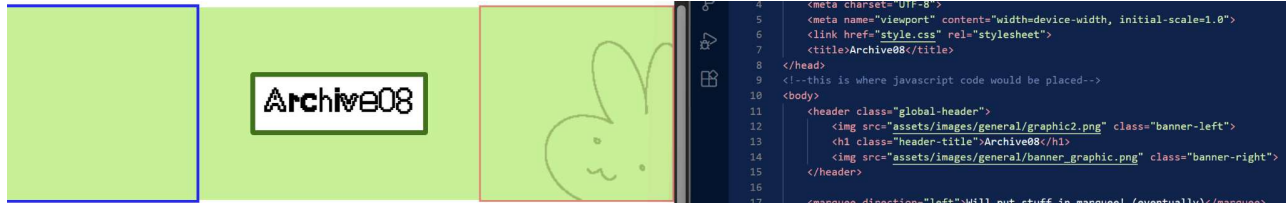

Since Sanrio characters are copyrighted, I'll have to start producing my own graphics.

24/06/26

Tried to keep graphic to the right, but margin pushes text to the left.

24/06/26 10:01 feat: add flexible banner layout. Added left img to balance it.

```

.banner-left{
  display: block;
  margin-right: auto;
  border: 3px solid blue;
}

.banner-right{
  display: block;
  margin-left: auto;
  border: 2px solid salmon;
}

```

25/06/26 11:16

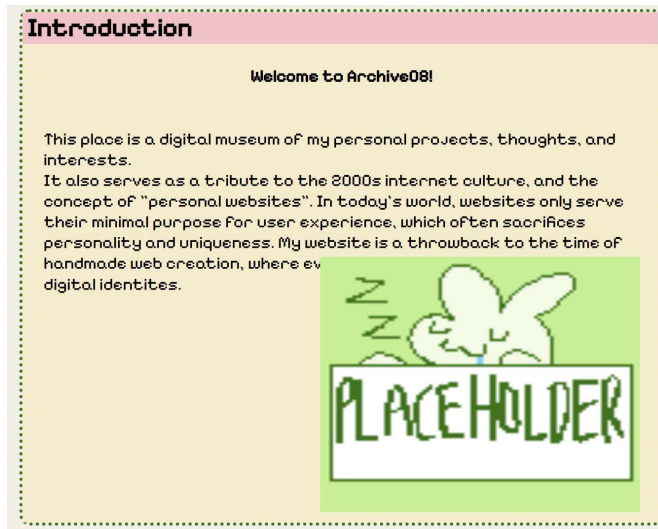

I want to avoid copyright material, so I'm replacing it with my own assets.

25/06/26 11:43

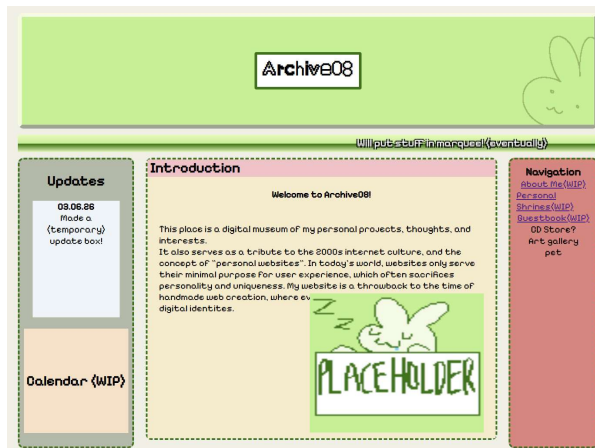

Trying to put outline on marquee, opting for text shadow?

01/07/26 1:43 testing border styles

I settled on dashed borders

13/07/26 8:03

My previous marquee style was messy, so I used -webkit-text-stroke to make a proper border.

Old ver:

New ver:

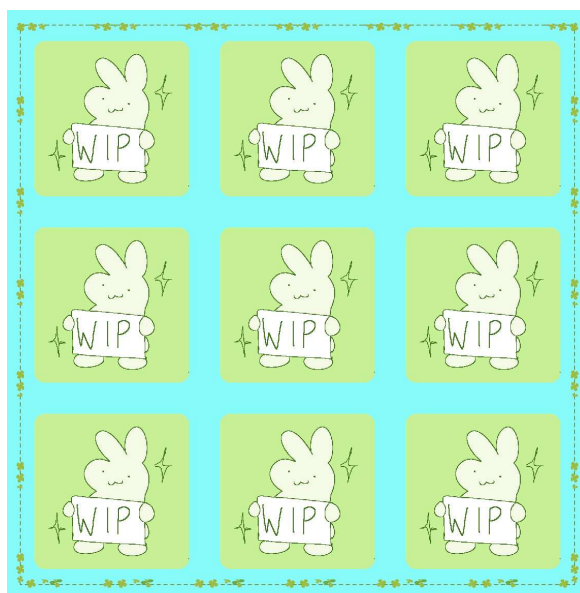

My only problem is that this uses webkit engine, which is non standard CSS. However, this only mainly affects Firefox Gecko engine, and there should not be any issues.

```

color: white;
font-size: large;
text-shadow:
  -2px -2px 0 #000,
  2px -2px 0 #000,
  -2px 2px 0 #000,
  2px 2px 0 #000;
font-size: larger;
-webkit-text-stroke: 4px #103600;
paint-order: stroke;

```

20/07/26 3:07

Changed border and managed to format shrine border to the right size

22/07/26 10:18

Working on about me section

Sprint 2 Review

i Summarise key feedback from trialling and testing.

The product of my second sprint had great reception.

For my first key question, I asked if the overall website layout was pleasing to look at. This included elements like colour and container placement. Generally, all my testers gave positive feedback. They liked the colours, placement and contents of the website. They especially like the marquee that I've included in each page. I believe this is because the moving aspect contrasts the otherwise static page. From this feedback, I will consider adding more moving elements to keep users engaged.

That being said, my other key question, revolving around the accessibility and navigation, had some improvements to be implemented. My tester noted the confusing content within my navigation bar. In between my links, I added a GIF graphic in hopes of making each link more distinct. My tester saw the graphic, and thought it was the actual link, noting the unclearness. From this, I will be sure to remove the confusing graphic, opting for simple spaces instead to distinguish each link. I have also been told that the text at my footer is hard to read, as the dark purple text colour blends in with the dark green background colour. I will also change the text colour so it will contrast better with the background.

My next feedback will be regarding the future interactive guestbook and drawing board I plan to make. Upon proposing this idea, my testers immediately raised the concern of inappropriate content. With these next features, there will most likely be the risk of being able to send harmful or offensive content within both messages and drawings. To prevent this, I may add the feature for personal moderation before content is publicly posted. I may also add automated moderation, which censors potential inappropriate topics.

Sprint 2 Retrospective

 Reflect on your progress throughout this sprint. Identify what went well, and what could be changed for the next sprint

Burndown Chart

End of Sprint

General Comments:

Outstanding Tasks:

- **Right navigation bar style:** First priority next sprint.
- **Splashscreen:** Second priority after navigation bar.
-

- **Art gallery style:** Big focus for sprint three. High priority.
- **Guestbook style:** Big focus for sprint three. High priority.
- **Image borders:** Low priority, will add as needed.
- **Shrine style:** Low priority. Focus on Shrine content.
- **Picture gallery style:** Low priority. Focus on gallery element more.
- **Footer style:** Low priority. Will focus if time EOS.
- **CD store:** Not priority. Chance of dropping due to copyright laws/spotify connectivity issues.

Blockers & Challenges:

- CSS was still a big challenge for me, who isn't much familiar with CSS styling. It mainly took a lot of time, but I managed to achieve the look that I intended.
- Copyright was also a notable blocker within my sprint. A lot of the images I wanted to use were not for public use, so I had to often create my own assets from scratch, which took more time.

What I'll do differently in Sprint 3:

- Make my CSS more efficient, using more global features that can apply to many different components.
- Check viability of components beforehand as to not eat up more time.

Trialled Components:

Relevant Implications Discussion:

Accessibility:

Regarding accessibility, I have made great efforts to keep my code clean and easy to read. I have added content regions, so users are not overwhelmed with code that is irrelevant to their intent. I have also made sure to include a noticeable but not straining contrast within my page layout, to keep sections easy to distinguish. In the future, I may add the option to control the mouse with a keyboard? For users who have trouble using the traditional mouse/touchpad.

Usability:

From my general feedback, I believe my stylized UI showcases my content very well, and users are able to view and navigation my content in a relatively easy way with minimal errors. To further increase the effectiveness of my usability, I will add additional elements to indicate user actions (e.g link hover effects).

Privacy:

This may be a potential concern going into sprint three, as users can also share personal information in addition to offensive content. To reiterate my proposal, I will need to add some kind of moderation to protect the privacy of others.

Functionality:

All links were functional.

Sprint 3

Sprint 3 Planning

i At the start of each sprint, look through your backlog and decide which tasks you will aim to complete during this sprint. Add these tasks to the relevant sprint. Complete your task sizing estimates, and create your burndown chart.

Comments:

Priority list:

- Polish right navbar
- Style splashscreen
- Add guestbook
- Add art gallery
- Finish about me
- Polish left sidebar
- Fix mid content
- Polish footer
- Fix shrine
- (possibly) add CD store

Development Log 3

i As you work on your project, take note of key trialling and testing in this section. Be sure to clearly indicate when you are trialling something vs testing.

- **Trialling** is about gathering information to inform decision making
- **Testing** is about confirming decisions

Boiled pasta (left) and pirkkala (right)

I decided on pirkkala.

05/08/26 10:23

starting to add button on link hover

06/08/26 10:59

Deciding whether to add box shadow for functionality?

Decided not to.

21/08/26 00:10

New navbar, with blinkies

00:13

I want to use windows XP style BG for the splashpage but it's copyrighted, so I'll have to find a free one...

00:47

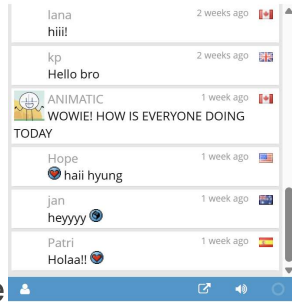

will need to create a GIF for index page soon. I had a look at preset GIF logos, but these do not fit my aesthetic.

00:59

I am now looking for good hosts for my guestbook. I had looked at the Cbox live

chat style [\(Cbox link\)](#), or the more popular Atabook guestbook

page [\(Atabook user\)](#). I found out that Atabook includes the options for messages under review and blocking inappropriate words, so I think it suits my webpage best.

Word filter

On this page you can add unwanted words. When a visitor leaves a message containing these words, they will be replaced by the replacing word. You can also block messages bad words.

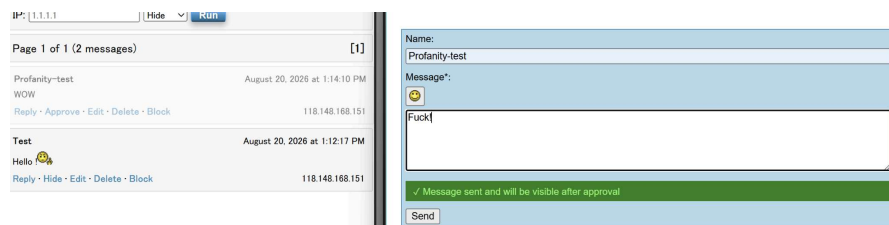

Add one word per line. Use * for partial matches: *word (ends with), word* (starts with *word* (contains).

Word list:

nigg*
bitch
fag
fagg*

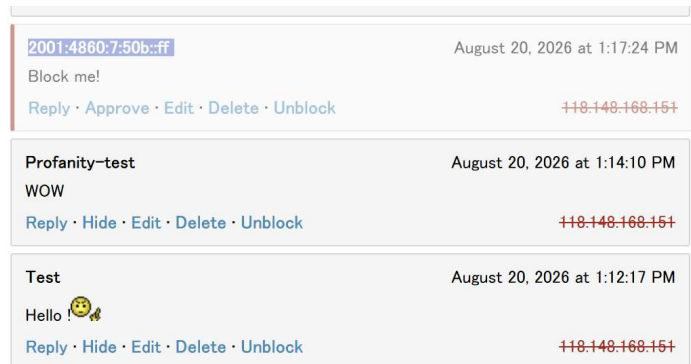

1:12 Now testing functionality of Atabook hosting page.

Approval system seems good.

Profanity check and

replacement seems **good**.

IP blocking is **working**.

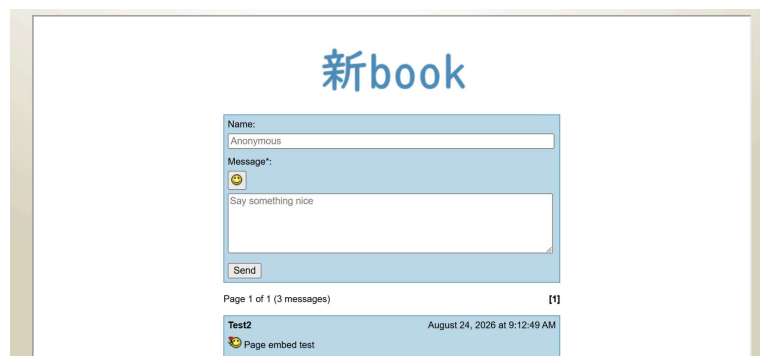

Atabook seems to be reliable, so I will be using it for my website.

1:36

Just found out using custom CSS is a paid feature :(Might need to rethink Atabook

1:46 Solved, I will instead iframe it into my website.

24/08/26 9:14

Tested sending messages

through Atabook page embed, it worked.

24/08/26 11:16

Working on the guestbook page. Navigation next to the guestbook embed feels uncentered, so I'm creating a horizontal bar underneath.

I realised that user can't click the whole box on highlight, and can only click the text. To better increase functionality, I will make the whole container the clickable link.

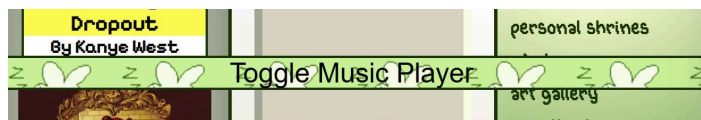

This supposed new structure allows for the whole box to be clickable.

25/08/26 11:26

Initially, I was going to create an analogue clock for my leftbar on the homepage. However, this may be too complicated, so I will just do a digital clock instead.

30/08/26 7:18

Figuring out button for music player.

8:48

I figured out the music player still plays even if it is hidden, maybe I can mute the whole page?

Muting elements on the page does not apply to embeds. But I think it should be fine for the user to pause manually.

Sprint 3 Review

 Summarise key feedback from trialling and testing.

My feedback from Sprint 3 went incredibly well. My first question found that my splashpage was effective, engaging, and was a clear gateway to the homepage of my site. I believe this is because of my decision to keep the splashpage simple, as to not overwhelm the user on the first impression of my site. From my feedback, it seems there are no complaints.

My second question was also met with good reception. Testers stated that navigation throughout the site was easy and accessible, having no trouble going through all of my pages. I think that my decision to add a bold highlight and changing text colour greatly helped accessibility and functionality of my site, maximising ease of use.

Design consistency and appeal was one of the largest compliments that my project had received. Testers stated that my design choices and colour palette worked together perfectly to create a polished and controlled look throughout the site. I personally think this was because of my deliberate use of

colour, trying to limit the range of colours I use as to not break consistency, but to also create enough of a contrast between elements.

While the feedback was generally overwhelmingly positive, one criticism that I have received was that my site should have more content within. The tester mentioned this when seeing my unfinished containers with few graphics or text. I wholeheartedly agree with this statement, and I will bring a bigger focus onto adding meaningful and engaging content for the users to see.

Sprint 3 Retrospective

i Reflect on your progress throughout this sprint. Identify what went well, and what could be changed for the next sprint

End of Sprint

General Comments:

Outstanding Tasks:

- **Add guestbook style:** Did not have enough time to properly implement, and it looked quite okay even without style.
- **Add img transitioning with arrow keys:** Planned to display art gallerying with arrow keys like img gallery, settled for normal layout.
- **Add drawing canvas:** Was hopefully going to add it, but I had no time and there was a lot to learn.
- **Add footer bg:** Generally low priority within tasks. No time.
- **Add footer text:** Generally low priority within tasks. No time.
- **Img border style:** Already made a couple border styles, so not that high priority.
- **Favourite sanrio drawing img:** Was concerned of copyright laws, so opted not to.
- **CD store bg:** Was already low priority, no time.

Blockers & Challenges:

- Learning javascript in such a short time was definitely harder than I thought. I still managed to implement most of what I had planned, though struggling with the new language.
- Copyright may also be an issue, as the legality of my use of images and media in my site seems to be morally grey. I will have to be aware of this.

- My lessened time because of other commitments (e.g mock exams) definitely posed a challenge within my project, as I had less time to polish and complete it.

Trialled Components:

- **Spotify embed iframe**
- **Javascript**

Relevant Implications Discussion:

Usability: Looking at the changes I've made to the navigation system, I believed that there is a significant increase in usability. I've added text highlighting on link hover, text colour change, and an additional graphic beside each link to ensure the user's experience with navigation does not cause much inconvenience.

Functionality: I have made great efforts of ensuring functionality within all my components. For each element, I make sure that it works successfully, and that all links and buttons are functional.

Privacy: Regarding privacy with the implementation of my guestbook, I believe that I have effectively made efforts to uphold safety and appropriation with the protection of privacy. There was an existing concern that I would not be able to filter out sensitive content or personal information. However, the guestbook that I had chosen had the option of putting messages under review before publicly posting them. I believe that through the use of this feature, I was able to manage any potentially dangerous content, and protect users from possible harm.

Final Project

Final Project Release:	https://github.com/22hsantos/Archive08/releases/tag/v3.0.0
Github Project Board	https://github.com/users/22hsantos/projects/3/views/8

Final Commentary

i Write a summary of your project overall. For Excellence, this must include an extensive discussion about how the information from planning, testing and trialling of components assisted in the development of a high-quality outcome.

Archive08 is a website that aims to pay tribute to the common practice of handmade webpages back in the early-mid 2000s. It presents meaningful, engaging, and interesting information and reflects the personality of its owner. In achieving this goal, two significant components were developed and implemented into my project.

First and foremost, project management tools and techniques were immensely helpful throughout the development of my final project. Through tools like the GitHub project board, I was able to better visualise my workflow, keep track of my progress, and predict any potential changes and challenges. When I had any outstanding tasks from previous sprints, the use of project management tools made it easy for said tasks to stay in relevance and increase chances of completion. Overall, use of project management tools greatly improved my project flow, and was a invaluable component in the making of my final product.

The most important component of my project was effectively the user interface and aesthetic. While in the early stages of development, I was still figuring out the direction I wanted of the appearance of the project. I was conflicted between the sharper edges of a Windows-XP like aesthetic, or a newer and rounder one. To trial this, I first went with the rounder look. I tried to achieve this by adding round borders to my containers, as well as a dotted border to fit the image. To ensure that I was positive in the direction I was heading in, I decided to compared two different websites which had the respective styles. In looking at differences side by side, I realised that the rounded look exuded a completely different vibes that I felt was different to mine. The rounded site was much more soft and calm, using a range of colours and textures. Regarding my site, I wanted a more rigid and engaging appearance, so I ultimately decided to make my elements sharper and use flatter colours.

Another significant component in my site is the navigation bar. To maximise usability, I needed to find different approaches in making an effective navigation system. I noticed that the links were quite close together, and may be hard to read. In fixing this problem, I had decided to either increase the spaces between the links or add divider graphics to break the flow a bit. I first tested the latter. I actually received user feedback on this trial. The tester stated that they were more confused, mistaking the divider graphic to be the actual text. I then realised that my use of dividers may provide the opposite effect, making navigation even more difficult by cluttering the space. To fix this, I removed the dividers entirely, added space between the links, and focused more on making the actually links themselves easier to read.

Through these processes, I was able to develop a successful and high-quality outcome that effectively boosted functionality and engagement with users. These necessary processes showcased the value of

relevant research, testing, and important feedback, which all worked together to create a polished element of my website.
